Corridor: Mediterranean Corridor (MED)

Month: 2026-10

European transport corridor
Mediterranean Corridor (MED)

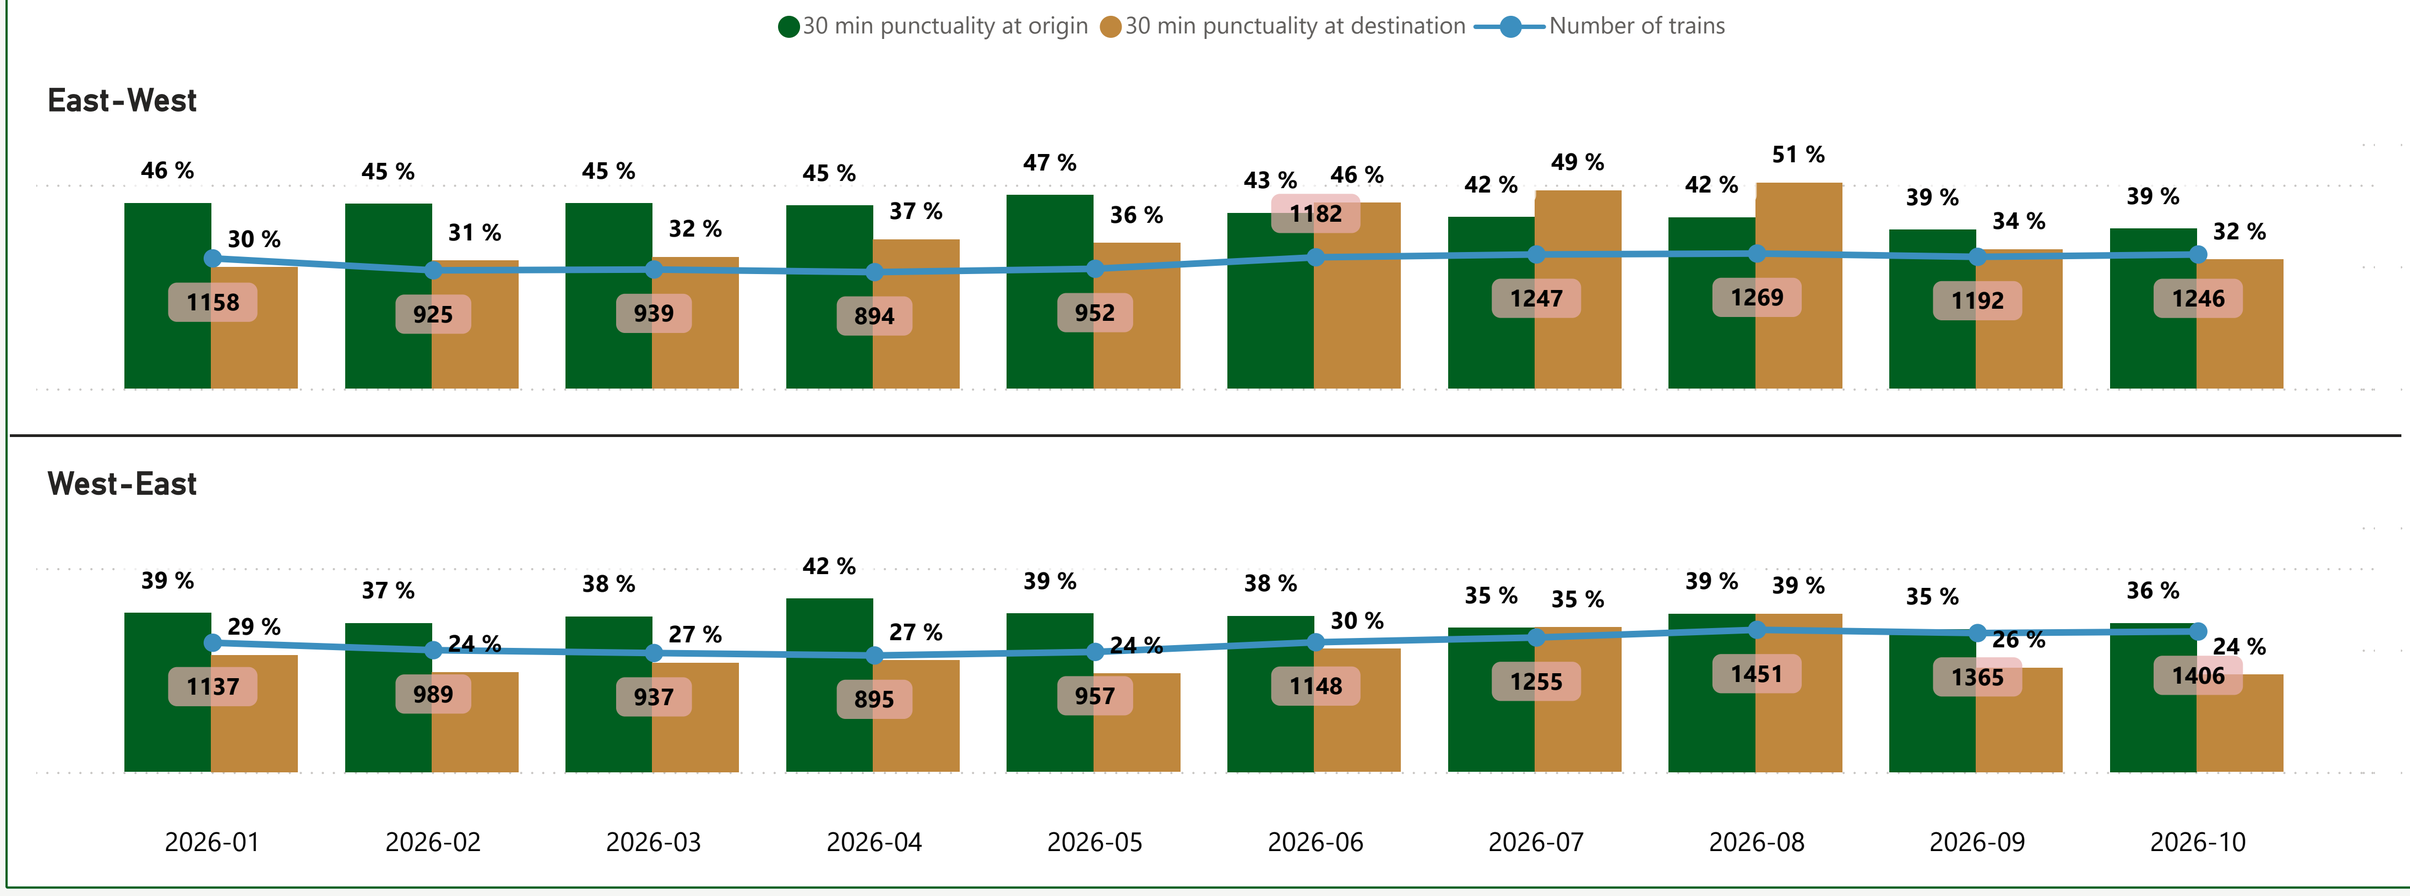
Train Performance Report

Management Summary

Punctuality Threshold: A train is classified as punctual if its delay is **30 minutes or less**.
Data Criteria: Punctuality calculations include only those trains for which **delta time values** at relevant locations were successfully transmitted to **RNE TIS**.
Delay Analysis: The **Amount and Distribution of Delays** graph illustrates the total delay minutes reported to TIS for all trains on the corridor, categorized by direction. The color-coded segments represent the proportional **responsibility** attributed to different group.
Train Definition: A corridor train is defined as an international freight train crossing a border along the corridor.

Origin: location where train run has started (first location for which the information was delivered to TIS)
Destination: location where train run has ended (last location for which the information was delivered to TIS)
Entry: location where train first enters corridor network (first location in train run belonging to corridor topology)
Exit: location where train last leaves corridor network (last location in train run belonging to corridor topology)

30 min. origin/destination punctuality and number of trains



30 min. entry/exit punctuality and number of trains
